

## Artikelbeschreibung/Produktabbildungen

**Beschreibung****Werkstoff:**

Elastomer NBR.

**Ausführung:**

Shorehärte ~70, schwarz.

**Hinweis:**

O-Ringe sind universell einsetzbare Dichtelemente zur Abdichtung gegen flüssige oder gasförmige Medien. Sie eignen sich für statische und untergeordnete dynamische Anwendungen. O-Ringe können sowohl radial als auch axial dichtend eingebaut werden. Die Dichtwirkung ergibt sich beim Einbau aus der axialen oder radialen Verpressung des Querschnittes. Im Betriebszustand verstärkt der Mediumsdruck die Deformation des O-Ringes und erhöht damit die Dichtfunktion. Für eine optimale Dichtwirkung sind O-Ringe mit einer möglichst großen Schnurstärke zu wählen.

Im Einbauraum ist auf korrekte Nutfüllung, Vorpressung, Dehnung bzw. Stauchung zu achten.

Bei statischer Anwendung sollte die Vorpressung bezogen auf die Schnurstärke 15 – 30% betragen. Bei dynamischer Anwendung 10 – 18% (Hydraulik), 4 – 12% (Pneumatik).

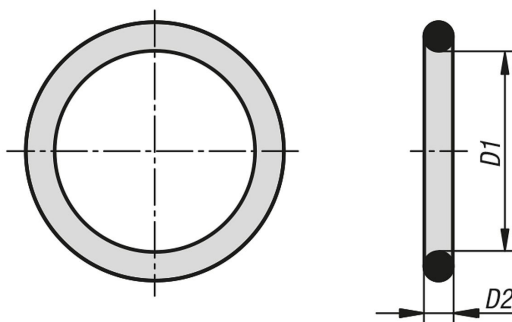

Im eingebauten Zustand sollte der O-Ring bezogen auf den Innendurchmesser max. 6% aufgedehnt  
max. 3% gestaucht werden.

Der Werkstoff NBR besitzt eine hohe Abriebfestigkeit und ist beständig gegen Schmieröle und -fette auf Mineralölbasis, Hydrauliköle H, H-L, H-LP, schwerentflammbare Druckflüssigkeiten HFA, HFB, HFC, aliphatische Kohlenwasserstoffe, Silikonöle und -fette, Wasser bis ca. 80 °C.

**Temperaturbereich:**

-30 °C bis +100 °C
